- It uses:
 - Java 17
 - Maven 3.9.9
 - TestNG
 - o Page Object Model (POM) design
 - Config files per environment: qa, stage, uat, etc.

C ------

CMD Commands You Used – With Explanations

Command	Purpose
cd D:\SatyaWS\FWjan2025POMSeries	Navigates to the project directory
mvn clean install -Denv="stage"	Cleans previous build, compiles, runs tests, and installs artifacts into local Maven repo using stage config
mvn clean install -Denv="qa"	Executes tests using qa.config.properties
mvn clean install -Denv="qa" - Dbrowser="chrome"	Specifies both environment and browser (customizable via your framework)
mvn clean install - DskipTests=true	Skips running tests, useful when you only want to compile or deploy
mvn test	Runs the test suite using the default or defined testng.xml

Command	Purpose
<pre>mvn test - DsuiteXmlFile=testng_parallel.xml</pre>	Executes tests in parallel as defined in that XML suite
allure serve allure-results	Launches an Allure report server from the test results directory

Parallel Execution Explained

You used:

```
mvn test -DsuiteXmlFile=testng_parallel.xml
```

- This means TestNG was instructed to run tests in parallel, either:
 - By methods
 - By classes
 - Or by tests (suites)

Check in testng_parallel.xml:

```
<suite name="ParallelSuite" parallel="methods" thread-count="4">
```

Parallel testing improves execution speed and tests your framework's thread safety.

Allure Reporting Integration

You generated Allure reports using:

```
allure serve allure-results
```

- Yes, reports were generated, because:
 - No error was shown during allure serve
 - Raw results were present in allure-results
 - Your pom.xml likely includes:

```
<plugin>
  <groupId>io.qameta.allure</groupId>
  <artifactId>allure-maven</artifactId>
  </plugin>
```

- Features of the report:
 - Passed/Failed/Skipped test breakdown
 - Step-wise logs with annotations
 - Screenshots and attachments (if implemented)

Eclipse + Maven Execution

You also ran test cases directly from **Eclipse IDE**, which provides multiple ways to execute Maven goals:

② Right-Click → Run As > Maven Build...

You might have seen these options:

Option	What it does	
Maven build	Opens a dialog to configure custom goals like clean install, test, or veri	
Maven clean	Deletes /tanget folder	
Maven install	Compiles and packages project and puts it into local repo	
Maven test	Runs only test cases	
Run As > TestNG Test	Runs the selected TestNG class or suite	

- ✓ You confirmed that you ran test cases both via:
 - Terminal (CMD prompt) and
 - Eclipse (Run As > Maven)

If you used Eclipse to run mvn clean install or mvn test, and allure-results directory was generated, then **Allure report generation is possible from Eclipse too** (you just need to run allure serve manually from terminal afterward).

☑ Successful Test Executions (Observed)

Env	Browser	Test Cases Passed
stage	firefox	loginPageTitleTest, loginPageUrlTest, forgotPwdLinkTest, dologinTest
qa	chrome	Same tests passed
qa	headless chrome	All passed
qa	firefox (final run)	All passed after fixing exception

! Failures – (Intentionally Skipped from Explanation)

You experienced:

- NullPointerException (due to inStream is null)
- FileNotFoundException
- SessionNotCreatedException for FirefoxDriver

Those are **environment/config issues**—excluded from this summary as per your request.

Interview Questions You Can Expect

Maven / Test Execution:

- 1. What does myn clean install do?
- 2. How do you run tests using different environments from Maven?
- 3. How do you skip tests while building a project?

Git:

- 4. What's the difference between git add, commit, and push?
- 5. How do you revert a pushed commit?

Parallel & Config:

- 6. How do you configure TestNG to run tests in parallel?
- 7. What is ThreadLocal, and why is it used in parallel test execution?

Allure:

- 8. How do you generate and view Allure reports?
- 9. What annotations are used in Allure (@Step, @Attachment)?
- 10. What info does Allure give you that standard TestNG doesn't?

Final Key Notes

Concept	Summary
Allure Report	Generated after test execution, needs allure-results folder, use allure serve to view
Eclipse Usage	You used "Run As > Maven Build" and "TestNG Test" to execute cases
Environment Switching	Done via -Denv="qa" or similar flags
Browser Switching	Done via -Dbrowser="firefox" or "chrome"
Parallel Testing	Defined in TestNG suite XML (parallel="methods")
Skip Tests	-DskipTests=true to avoid test execution but still build the project
Git Workflow	Add → Commit → Push (You staged 12 files and pushed to GitHub)
